

Frontend Developer Job Search Report

Prepared for: **Zeeshan Ahmed** — Front-End Developer (React / Next.js / TypeScript) · 2 years experience · Islamabad, Rawalpindi & Lahore · July 14, 2026

How this report was built (please read): All listings below come from live searches of Indeed Pakistan, Glassdoor, LinkedIn, Rozee.pk, Bayt and company career sites conducted on July 14, 2026. Job posts in Pakistan turn over quickly and aggregator pages update daily, so every listing should be re-verified on the source link before applying. Publicly-listed HR emails are rare and unverified emails have been deliberately excluded rather than guessed — for companies without a listed email, apply via the careers page or LinkedIn, which local recruiters actively monitor. ATS scores are estimates based on keyword overlap between your resume and each posting's stated requirements.

Section 3 — Resume Match Analysis

Overall market fit: strong (est. 80–90% ATS match for mid/associate React roles). Your resume already contains nearly every keyword these postings screen for: React.js, Next.js, TypeScript, Redux Toolkit, TanStack Query, Zustand, Tailwind CSS, REST APIs, HTML5/CSS3, Git, responsive design, lazy loading, code splitting, RBAC, Socket.io, Agile/Scrum. The five sole-owner production projects with live URLs are your strongest asset — very few 2-year candidates can show that.

Gaps that appear repeatedly in these postings (in priority order):

1. Testing depth — Jest/RTL are marked 'basic' on your resume, while Cypress/Selenium E2E and unit-test coverage appear in many JDs. Adding tests to one live project and changing 'basic' to concrete coverage numbers is your highest-ROI fix.
2. CI/CD & Docker — Jenkins, GitHub Actions, Docker show up often. You list CI/CD as a practice; name the actual tools you used (e.g. Vercel deploy pipelines, GitHub Actions).
3. Node.js/Express basics — many 'frontend' roles in PK are quietly MERN. Even a small Express/Nest side project widens your funnel by ~30% of postings.
4. React Native — Islamabad/Rawalpindi has heavy React Native demand; your React depth makes this a 4–6 week upskill that unlocks a whole second market.
5. Degree screening — several larger firms (CareCloud, Securiti, 10Pearls) list a BS requirement. Your HSC + Saylani certification may get auto-filtered; counter it with referrals, LinkedIn outreach to hiring managers, and leading your resume/cover letter with '2 years production experience, 5+ shipped products'.
6. GraphQL — occasional keyword in product-company JDs; a mention of familiarity helps ATS parsing even at exposure level (only if true).

Suggested keyword additions (only where truthful): unit testing / test coverage, GitHub Actions, Vercel CI/CD pipeline, Webpack/Vite build optimization, WCAG accessibility, i18n/localization (you have RTL — name 'i18n' explicitly), REST API integration (already present — keep), SSR/SSG (name these explicitly for Next.js roles).
